M229 Advanced Topics in MRI

Holden H. Wu, Ph.D.

2024.04.02

**UCLA**

*Department of Radiological Sciences  
David Geffen School of Medicine at UCLA*

# Introduction

- Your instructor: Holden
- Your TAs: Wenqi, Elif
- Guest lecturers
  - Dr. Kyung Sung, Shu-Fu Shih, Dr. Anthony Christodoulou, Dr. Jingwen Yao, Dr. Fei Han, Dr. Lea Azour
- You

# MRI Research

## Technical Developments

Physics  
Contrast mechanisms  
Mathematical models  
Hardware  
Data acquisition  
Data reconstruction  
Data processing  
Quantitative analysis  
Data integration  
Software

## Clinical Applications

Anatomical imaging  
Functional imaging  
Multi-modal imaging  
Quantitative imaging  
  
for  
Diagnosis / screening  
Treatment planning  
Procedural guidance  
Treatment assessment  
Monitoring

# MRI Research

- MRI provides powerful information
- MRI is slow ...
  - develop new acquisition and reconstruction methods

# Goals of M229

- Understand state-of-the-art MR image acquisition and reconstruction
- Understand impact of MR technical developments on clinical applications
- Prepare for research in MRI

# Prerequisites

- M219 or equivalent
- Strong interest in MRI research
- Some programming experience

# Course Topics

- Pulse Sequences
- RF Pulse Design
- Fast Imaging Trajectories
- Parallel Imaging
- Compressed Sensing
- Deep Learning Recon
- Motion in MRI
- Susceptibility Imaging
- Invited Speakers
- Body MRI
- Lung MRI

# Course Logistics

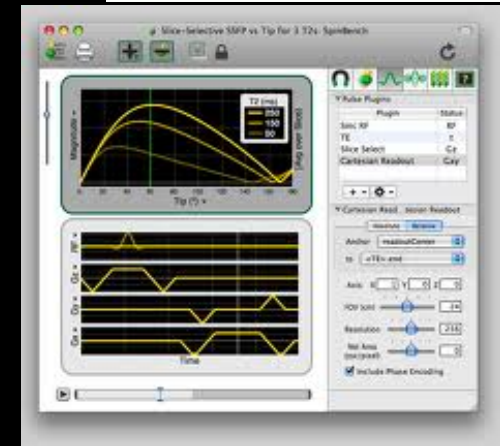

- Textbook: Handbook of MRI Sequences
  - Digital copy available through UCLA library
- Course website:  
<https://mrrl.ucla.edu/pages/m229>
  - Materials and links
  - Sample code and data
- Web resources
  - Past ISMRM education talks
- Mailing list: [m229@lists.ucla.edu](mailto:m229@lists.ucla.edu)

# Course Logistics

- Office hours
  - Instructor: Fri 10-11 am; appointment
  - TAs: TBD
  - Send email
- MATLAB
  - available through UCLA
- SpinBench
  - available for free (Mac only)

# Course Logistics

- Grading
  - Participation (10%)
  - Homework (30%)
  - Final Project (60%)
- Homework
  - 2 MATLAB programming assignments
  - Turn in electronically (PDF and code)

# Final Project

- Have ~6 weeks; start thinking now!
  - Take advantage of office hours
- Can be your own research
- Can be from list of ideas
- Components
  - Proposal (1 page), due in May
  - Abstract (1 page), due in early June
  - Presentation, in mid June

# 2023 Projects

- Random Matrix Theory-Based Image Domain Denoising for Diffusion-Relaxation Correlation Spectrum Imaging
- Comparison of T1-T2 Fitting Strategies Based on Multitasking Framework
- Universal Sequence-Invariant Deep Learning for CMR Multitasking Image Reconstruction
- Fractional Myocardial Blood Volume Estimation using Ferumoxytol-Enhanced Magnetic Resonance Imaging: Early Findings in Human Subjects
- A Novel Local Shim Array for B0 Shimming of the Prostate

# 2023 Projects

- MRI-based Radiomics Feature Analysis for Clinically Significant Prostate Cancer Diagnosis
- Myocardial Scar Detection in Ferumoxytol-Enhanced Cardiac MRI: A Dictionary Learning Approach Using LGE-Labeled Ferumoxytol-Enhanced MOLLI Images
- Deep-Learning Based Parametric Maps Generation for Undersampled CEST MRI Data
- The Influence of Undersampling Schemes on Compressed Sensing Reconstruction in Brain MRI
- 5D Cardiorespiratory Resolved Imaging with Ferumoxytol for Pediatric Congenital Heart Disease

# 2022 Projects

- Multicomponent T2 Mapping with DESS
- Pseudo-Resting-State Functional MRI from Dynamic Susceptibility Contrast Perfusion MRI Reveals Functional Networks
- T2-Weighted Dual Echo Steady State Knee MR Image Reconstruction Using Low Rank Modeling of Local k-Space
- Simultaneous Multi-Slice vs. In-Plane Acceleration: Comparison of Reconstruction Results Using ESPIRiT for Radial Golden Angle Abdominal MRI
- Multi-Slice Mask R-CNN for Needle Feature Detection and Segmentation in 3D T1 VIBE MR Images

# 2021 Projects

- Using Feed-Forward Neural Network to Generate Amide Proton Transfer Maps from Field Corrected Undersampled Z-Spectrum in the Brain at 3T
- Technique Development for Motion-Resolved Quantitative Imaging and Quantitative Susceptibility Mapping for Heart Chamber Oxygenation
- Coronary MR Image Reconstruction Using Convolutional Neural Networks
- Dynamic MR Reconstruction from Undersampled Data: A Comparison between KWIC and GRASP Reconstruction
- Effect of Attention Mechanisms on Prostate Segmentation in MRI

# 2020 Projects

- Ferumoxytol Relaxometry at 0.35 T to Investigate Optimized T1-weighted Imaging
- Evaluation of Spiral-Cartesian Sampling for 4D Real-time MR Multi-contrast Imaging Using Digital Motion Phantom
- A Deep Learning Method for Undersampled MRI Reconstruction
- Hyperpolarized  $^{13}\text{C}$  MRI Cellular Metabolism and Transport Modeling with Parameters Estimation
- Probabilistic Tractography
- Evaluation of T2-weighted MRI Pulse Sequence for Visualization and Sparing of Urethra with MR-guided Radiation Therapy (MRgRT) on-board MRI

# 2020 Projects

- Image Synthesis in Multi-contrast MRI with Deep Neural Network
- An Investigation on the Flip Angle Dependence of Diffusion-Weighted Steady-State Free Precession using Monte-Carlo Simulations
- Deep Learning based Cardiac MRI Cine Super Resolution
- Automatic Segmentation of Myocardium in First-pass Cardiac MRI Datasets Using a Patch-Based Convolutional Neural Network Approach

# 2019 Projects

- Semi-Quantitative Low-Field DCE Perfusion Analysis: A Proof of Concept
- Brain Connectivity Study of Bipolar Disorder Based on fMRI
- Improved Correlation of Prostate Multi-Parametric MRI with Histologic Findings using Deep Learning
- Investigation of Robustness of Two Myocardium Segmentation Models to Training Datasize and Shifts on Training Masks
- Anisotropic Super-Resolution in Prostate MRI using Deep Learning

# 2019 Projects

- Assessment of Time Optimal Simultaneous Multi-Slice Excitation Pulses with Low Peak RF Power
- Myocardial Blood Volume Measurement using MOLLI Sequence and Water Exchange Model
- Accelerated Volumetric Free-Breathing Liver Fat Quantification using Low-N-Rank Tensor Reconstruction
- A SPIRiT-Like Deep Learning Network with Better Robustness for Diverse Sampling Trajectories
- T1 Mapping with Flow Effect

# 2018 Projects

- Dynamic Magnetization Evolution Visualizer
- CEST Fingerprinting Using Low-Rank Constraint
- Prostate Cancer Lesion Prediction using Multi-Parametric MRI via Deep Convolutional Neural Network
- Contrast Optimization of T1-Weighted Inversion Recovery in Cardiac MRI for Chronic Myocardial Infarction Detection without Contrast Agent
- Undersampled MR Image Reconstruction Using Convolutional Neural Network
- Glioma Segmentation in Multimodal MRI Scans using 3D Convolutional Neural networks

# 2018 Projects

- Dynamic Myocardial Hyper-Intensity in FLASH Cardiac Cine Imaging: Is it an Artifact?
- Optimizing Parameters to Enhance T2 Mapping Accuracy and Efficiency with Fast Spin Echo
- Plug and Play ADMM with Deep CNN Prior for MRI Reconstruction from Under-Sampled Data
- Using Prospectively Trained Artificial Neural Networks to Improve Cardiac Diffusion Tensor Reconstruction
- Implementation of Magnetic Resonance Image Example-Based Contrast Synthesis Method
- Prospective Single Self-Gating for Bulk Motion Correction

# 2017 Projects

- Magnetization Preparation: Enhancing T1 Contrast in Infarcted Myocardium
- Compressed-Sensing Phase-Contrast MRI with Hybrid One and Two-Sided Flow-Encoding and Velocity Spectrum Separation
- Optimization of Magnetic Resonance Fingerprinting Acquisition Scheme
- Estimating Diffusion Time for CODE Optimized Monopolar Diffusion Weighted MRI EPI Sequence
- Estimation of Non-Excitable Area Around Ferromagnetic Objects in MRI

# 2017 Projects

- Efficient Super-Resolution in Magnetic Resonance Imaging Based on Deep Neural Networks
- High Resolution Distortion Reduced Diffusion Prostate MRI with Minimal Echo Time using ENCODE (Eddy Current Nulled Convex Optimized Diffusion Encoding)

# 2016 Projects

- Evaluation of Polynomial Surface Fitting for In Vivo Eddy Current Correction of PC-MRI Data Sets
- Prospective Motion Tracking by Using Multiple Temporal Resolution Imaging Navigators
- Automated Tissue Segmentation Using MRI Fingerprinting
- Evaluation of Rapid Cardiac Imaging Using a bSSFP Pulse Sequence at 0.345 T
- Evaluation of Sparsifying Transforms for Low-Rank Tensor Imaging
- NUFFT-Based CLEAR Algorithm for Non-Cartesian MRI

# 2016 Projects

- Comparison of Various Sampling Trajectories for Accelerated Cardiac DTI Reconstruction Using Joint Low-Rank Model Sparsity Constraint
- Parameters Analysis and Image Quality Assessment in k-t SLR Method
- Validation of Using 3D Stack-of-Stars with Dixon Fat-Only Signal for Respiratory Motion Detection in DCE-MRI

# 2015 Projects

- Design and Validation of a Minimum Time VERSE Pulse for 4D Flow MRI
- Polymer Drug Delivery Release Study: Modeling In Vivo Drug Release Using Contrast Agent
- T2-Prepared Gradient Echo for Simultaneous T2-Thermometry Imaging
- 2D Multi-Slice Background Suppression for Brain Arterial Spin Labeling Perfusion Imaging
- Motion Compensation with Localized Translations for High Respiratory Gating Efficiency
- Toward Improved Respiratory Self-Gating: From SI Projection Acquisition to Motion Extraction

# 2014 Projects

- Evaluation of Temporal Blurring Effect in Dynamic MRI using Golden Angle Radial Acquisition and K-Space Weighted Image Contrast (KWIC)
- Phase Contrast MRI with Flow Compensation View Sharing (FCVS)
- Motion Sensitivity of Diffusion Encoding Gradient Schemes in Cardiac Diffusion MRI
- Comparison of TSE and SSFP for Myocardium T2 Mapping
- Diffusion of Contrast Agent in Dynamic Contrast Enhanced (DCE)-MRI

# 2014 Projects

- Effects of T1/T2 and B1 on bSSFP Catalyzation
- Real Time MR Imaging Using Dynamic Golden Angle Radial Acquisition with SPIRiT Reconstruction
- Comparing Fat-Water Separation for Radial and Cartesian Acquired Data
- Partially-Dephased SSFP: with Applications in fMRI
- Accelerated left ventricular twist measurement using CAIPIRINHA
- Effects of Under-sampling Pattern on GRAPPA, SPIRiT and ESPIRiT

Questions?

# Notation and Conventions

- $\omega = \gamma B$ 
  - $|B| = B_0 + G_x x + G_y y + G_z z + B_1 + \Delta B$
  - $\omega_0 = \gamma B_0$
- RF pulse
  - flip angle  $\theta$
  - phase  $\phi$  (=0 along x)

$$\vec{B} = B_0 \hat{k} + B_1(t) [\cos \omega t \hat{i} - \sin \omega t \hat{j}]$$

# Notation and Conventions

- Left-handed rotation and precession

rotating frame at  $\omega_0$

rotating frame at  $\omega_0$

# Preview

- Closer look at course schedule
  - [https://mrrl.ucla.edu/pages/m229\\_2024](https://mrrl.ucla.edu/pages/m229_2024)

# Preview: RF Pulse Design

- Adiabatic Pulses
- Multi-dimensional Excitation
- SLR
- RF Pulse Design Tool (MATLAB)

# Preview: Pulse Sequences

- Rapid Gradient Echo
- Fast (Turbo) Spin Echo
- Bloch Simulation (MATLAB)
- Extended Phase Graphs (MATLAB)

# Questions?

- Related courses of interest
  - PBM 222 MR Spectroscopy
  - PBM/BE M236 MR Contrast Mechanisms

# Thanks!

Holden H. Wu, Ph.D.
