What is MRI?

- Magnetic
 - We need a big magnet
- Resonance
 - Excitation energy has to be on-resonance
- Imaging
 - We can make pretty pictures

What is MRI?

MRI follows a classic excitation-reception paradigm.

Excitation (RF Pulse) Reception (FID or **Echo**)

Faraday's Law of Induction

MRI encodes spatial information and image contrast in the echo.

Requirements for MRI

- NMR Active Nuclei
 - e.g. ^1H in H_2O
- Magnetic Field (B_0): Polarizer
- RF System (B_1): Exciter
- Coil: Receiver
- Gradients (G_x, G_y, G_z): Spatial Encoding
