Introduction

M229 Advanced Topics in MRI

Holden H. Wu, Ph.D.

Kyung Sung, Ph.D.

2019.04.02

UCLA

Department of Radiological Sciences
David Geffen School of Medicine at UCLA

Introduction

- Your instructors
  - Holden and Kyung

- Your TAs
  - TBD and Zhaohuan Zhang

- Guest lecturers
  - Drs. Le Zhang, Xiaodong Zhong, Debiao Li

- You

MRI Research

Technical Developments	Clinical Applications
Physics	Anatomical imaging
Contrast mechanisms	Functional imaging
Mathematical models	Multi-modal imaging
Hardware	Quantitative imaging
Data acquisition	
Data reconstruction	for
Data processing	Diagnosis / screening
Quantitative analysis	Treatment planning
Data integration	Procedural guidance
Software	Treatment assessment
	Monitoring

MRI Research

- MRI provides powerful information

- MRI is slow …
  - develop new acquisition and reconstruction methods

Goals of M229

- Understand state-of-the-art MR image acquisition and reconstruction

- Understand impact of MR technical developments on clinical applications

- Prepare for research in MRI

Prerequisites

- M219 or equivalent

- Strong interest in MRI research

- Some programming experience

Course Topics

- RF Pulse Design
- Pulse Sequences
- Fast Imaging Trajectories
- Motion in MRI
- Parallel Imaging
- k-t Reconstruction
- Compressed Sensing

- Invited Speakers
  - Temperature Mapping
  - TBD
  - TBD

Course Logistics

- Textbook: Handbook of MRI Sequences
- Course website:

 https://mrrl.ucla.edu/pages/m229

  - with materials and links
 - sample code and data
- Web resources
  - past ISMRM education talks

- Mailing list: bmp229@lists.ucla.edu

Course Logistics

- **Office hours**
  - instructors: Fri 10 am - 12 noon
  - TAs: TBD
  - send email

- **MATLAB student version**
  - available at UCLA bookstore

- **SpinBench**
  - available for free (Mac only)

Course Logistics

- Grading
  - Participation (10%)
  - Homework (30%)
  - Final Project (60%)

- Homework
  - 2 MATLAB programming assignments
  - Turn in electronically (PDF and code)

Final Project

- ~6 weeks; start thinking now!
  - come to office hours

- Can be your own research

- Can be from list of ideas

- Components
  - Proposal (1 page), due in early May
  - Abstract (1 page)
  - Oral presentation (10 min), Q&A (10 min) 6/11 (Tue) and/or 6/13 (Thu)

2014 Projects

- Evaluation of Temporal Blurring Effect in Dynamic MRI using Golden Angle Radial Acquisition and K-Space Weighted Image Contrast (KWIC)

- Phase Contrast MRI with Flow Compensation View Sharing (FCVS)

- Motion Sensitivity of Diffusion Encoding Gradient Schemes in Cardiac Diffusion MRI

- Comparison of TSE and SSFP for Myocardium T2 Mapping

- Diffusion of Contrast Agent in Dynamic Contrast Enhanced (DCE)-MRI

2014 Projects

- Effects of T1/T2 and B1 on bSSFP Catalyzation

- Real Time MR Imaging Using Dynamic Golden Angle Radial Acquisition with SPIRiT Reconstruction

- Comparing Fat-Water Separation for Radial and Cartesian Acquired Data

- Partially-Dephased SSFP: with Applications in fMRI

- Accelerated left ventricular twist measurement using CAIPIRINHA

- Effects of Under-sampling Pattern on GRAPPA, SPIRiT and ESPIRiT

2015 Projects

- Design and Validation of a Minimum Time VERSE Pulse for 4D Flow MRI

- Polymer Drug Delivery Release Study: Modeling In Vivo Drug Release Using Contrast Agent

- T2-Prepared Gradient Echo for Simultaneous T2-Thermometry Imaging

- 2D Multi-Slice Background Suppression for Brain Arterial Spin Labeling Perfusion Imaging

- Motion Compensation with Localized Translations for High Respiratory Gating Efficiency

- Toward Improved Respiratory Self-Gating: From SI Projection Acquisition to Motion Extraction

2016 Projects

- Evaluation of Polynomial Surface Fitting for In Vivo Eddy Current Correction of PC-MRI Data Sets

- Prospective Motion Tracking by Using Multiple Temporal Resolution Imaging Navigators

- Automated Tissue Segmentation Using MRI Fingerprinting

- Evaluation of Rapid Cardiac Imaging Using a bSSFP Pulse Sequence at 0.345 T

- Evaluation of Sparsifying Transforms for Low-Rank Tensor Imaging

- NUFFT-Based CLEAR Algorithm for Non-Cartesian MRI

2016 Projects

- Comparison of Various Sampling Trajectories for Accelerated Cardiac DTI Reconstruction Using Joint Low-Rank Model Sparsity Constraint

- Parameters Analysis and Image Quality Assessment in k-t SLR Method

- Validation of Using 3D Stack-of-Stars with Dixon Fat-Only Signal for Respiratory Motion Detection in DCE-MRI

2017 Projects

- Magnetization Preparation: Enhancing T1 Contrast in Infarcted Myocardium

- Compressed-Sensing Phase-Contrast MRI with Hybrid One and Two-Sided Flow-Encoding and Velocity Spectrum Separation

- Optimization of Magnetic Resonance Fingerprinting Acquisition Scheme

- Estimating Diffusion Time for CODE Optimized Monopolar Diffusion Weighted MRI EPI Sequence

- Estimation of Non-Excitable Area Around Ferromagnetic Objects in MRI

2017 Projects

- Efficient Super-Resolution in Magnetic Resonance Imaging Based on Deep Neural Networks

- High Resolution Distortion Reduced Diffusion Prostate MRI with Minimal Echo Time using ENCODE (Eddy Current Nulled Convex Optimized Diffusion Encoding)

2018 Projects

- Dynamic Magnetization Evolution Visualizer

- CEST Fingerprinting Using Low-Rank Constraint

- Prostate Cancer Lesion Prediction using Multi-Parametric MRI via Deep Convolutional Neural Network

- Contrast Optimization of T1-Weighted Inversion Recovery in Cardiac MRI for Chronic Myocardial Infarction Detection without Contrast Agent

- Undersampled MR Image Reconstruction Using Convolutional Neural Network

- Glioma Segmentation in Multimodal MRI Scans using 3D Convolutional Neural networks

2018 Projects

- Dynamic Myocardial Hyper-Intensity in FLASH Cardiac Cine Imaging: Is it an Artifact?

- Optimizing Parameters to Enhance T2 Mapping Accuracy and Efficiency with Fast Spin Echo

- Plug and Play ADMM with Deep CNN Prior for MRI Reconstruction from Under-Sampled Data

- Using Prospectively Trained Artificial Neural Networks to Improve Cardiac Diffusion Tensor Reconstruction

- Implementation of Magnetic Resonance Image Example-Based Contrast Synthesis Method

- Prospective Single Self-Gating for Bulk Motion Correction

Questions?

Notation and Conventions

- $\omega = \gamma\, B$

  - $|B| = B_0 + G_x x + G_y y + G_z z + B_1 + \Delta B$

  - $\omega_0 = \gamma\, B_0$

- RF pulse

  - flip angle θ
  - phase ϕ (=0 along x)

  $$\vec{B} = B_0 \hat{k} + B_1(t)[\cos \omega t \hat{i} - \sin \omega t \hat{j}]$$

Notation and Conventions

- Left-handed rotation and precession

rotating frame at ω_0 rotating frame at ω_0

Preview

- Closer look at course schedule
  - https://mrrl.ucla.edu/pages/m229_2019

Preview: RF Pulse Design

- Multi-dimensional Excitation

- SLR

- Adiabatic Pulses

- RF Pulse Design Tool (MATLAB)

- Read textbook before Thu class

Preview: Pulse Sequences

- Rapid Gradient Echo

- Fast (Turbo) Spin Echo

- Bloch Simulation (MATLAB)

- Extended Phase Graphs (MATLAB)

Questions?

- Related courses of interest
  - PBM 222 MR Spectroscopy
  - PBM 225 MR Contrast Mechanisms

Thanks!
